Pilots prove the concept.
Leaders prove the value.

Most organisations are spending more on AI than ever and getting less back than they expected. Pilots succeed. Scale fails. The gap between proof of concept and enterprise-wide impact is not a technology problem. It is a leadership problem.

The Agentic Organisation gives Europe's senior leaders a complete transformation framework for the age of AI agents: how to structure the investment decision, how to redesign processes and teams, and how to lead the transition from individual tool use to organisation-wide intelligence.

Built for the European context. Grounded in 25 years of transformation experience. Written for leaders who have decided that irrelevance is not a risk they are willing to carry.

Stephan Hartgers-Rus is a seasoned leader in digital strategy and AI transformation, with a career spanning McKinsey & Company and senior advisory roles across Europe. Over 25 years, he has guided executive teams through complex technology transformations. He holds degrees in Econometrics & Computer Science, and recently became CEO of Xomnia, a leading Dutch data and AI consultancy.
